

Take the pressure off.

Boiler loss occurs frequently and can result in costly property damage, production outage and long-term revenue loss.

Is your boiler an accident waiting to happen?

Ensure proper operation with Affiliated FM's online training course

Safe Boiler Operation.

To register for the course, visit <http://training.affiliatedfm.com>.

It's free and it takes less than one hour to complete. And, it can be accessed 24 hours a day, seven days a week from any computer connected to the Internet! *No downloads required!*

When you complete this course, you will be able to:

- Identify the four most common hazards associated with boiler operation
- Minimize or eliminate those risks by implementing a rigorous maintenance program
- Determine the frequency in which various safety devices should be maintained and tested
- Identify and discern the key operating specifications of the three most common types of boilers
- Describe the significance of the various governing bodies that regulate and control boiler fabrication, operation, maintenance and inspection

For more information, visit www.affiliatedfm.com/training, or contact Paul Mullin, corporate training, at +1 (1)781 255 4621 or paul.mullin@fmglobal.com.

Designed for boiler operators, boiler room supervisors and other maintenance personnel who want to learn more about safe boiler operation, the course can be incorporated into in-house training programs or used individually. There's no limit to the number of employees you can register. Best of all, managers can track the performance and progress of those taking the course!
